"Isolation and cDNA cloning of a novel galanin-like peptide (GALP)
J. Gen. Virol. 72:2333-2337(1991).
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-!- SIMILARITY: TO ORF3 PROTEIN FROM POTEXVIRUSES AND TO THE 14 kDa PROTEIN FROM BSWY RNA 2BETA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
